Stabile Einschreibungen und beliebte Studiengänge: Universität Basel beginnt Herbstsemester 2025

Studierende vor dem Kollegienhaus der Universität Basel. (Foto: Universität Basel, Kostas Maros)

Am kommenden Montag starten an der Universität Basel 12'890 Studierende und Doktorierende ins Herbstsemester 2025. Die Zahl der Einschreibungen hat gegenüber dem Vorjahr leicht zugenommen, und die Gesamtzahl der Studierenden wird auch 2025 die 13'000er-Marke wieder überschreiten.

11. September 2025

Die bisherigen Einschreibungen deuten auf einen leichten Anstieg der Studierendenzahlen im Studienjahr 2025/26 hin. Die Zahl der bisher registrierten Bacheloreintritte liegt bei 1630 und damit leicht unter dem Wert des Vorjahres. Zum Vergleich: Im Jahr 2024 hatten sich zu Semesterbeginn 1681 Studierende neu in ein Bachelorstudium eingeschrieben.

Die Anmeldungen auf Masterstufe haben im Vergleich zum Vorjahr hingegen noch einmal zugenommen. Mit 516 Eintritten von Studierenden aus in- und ausländischen Universitäten hat diese Zahl eine Woche vor Vorlesungsbeginn den Wert des Vorjahres (486) übertroffen. Schon heute steht fest, dass die Gesamtzahl der Studierenden auch im Jahr 2025 die Marke von 13'000 überschreiten wird.

Aktuell zählt die Universität Basel 12'890 Studierende; im Vorjahr waren es zu Semesterbeginn 12'764. Die Zahl der Studierenden wird sich noch erhöhen, da in den ersten Semesterwochen mit weiteren Einschreibungen auf Bachelor-, Master- und Doktoratsstufe zu rechnen ist.

Zum Semesterstart erwartet die neuen Studierenden wieder ein attraktives Rahmenprogramm, das mit der Studieneröffnungsfeier im Theater Basel beginnt und sich über die gesamte erste Semesterwoche erstreckt.

Beliebte Fächer und Studiengänge 2025

Im Jahr 2025 sind Psychologie, Rechtswissenschaft und Wirtschaftswissenschaften bei den Studienanfängerinnen und -anfängern im Bachelor besonders beliebt. Auch die naturwissenschaftlichen Fächer Pharmazeutische Wissenschaften, Biologie und Informatik sind stark nachgefragt.

Links

Studierendenstatistiken

Bei den Geistes- und Gesellschaftswissenschaften stossen die Fächer Geschichte, Politikwissenschaft, Soziologie und Englisch auf hohes Interesse, gefolgt von der Deutschen Philologie und der Medienwissenschaft.

Auf Masterstufe sind die Studiengänge Psychologie, Wirtschaftswissenschaften, Rechtswissenschaft, Pharmazie und Drug Sciences und Molekularbiologie besonders gefragt.

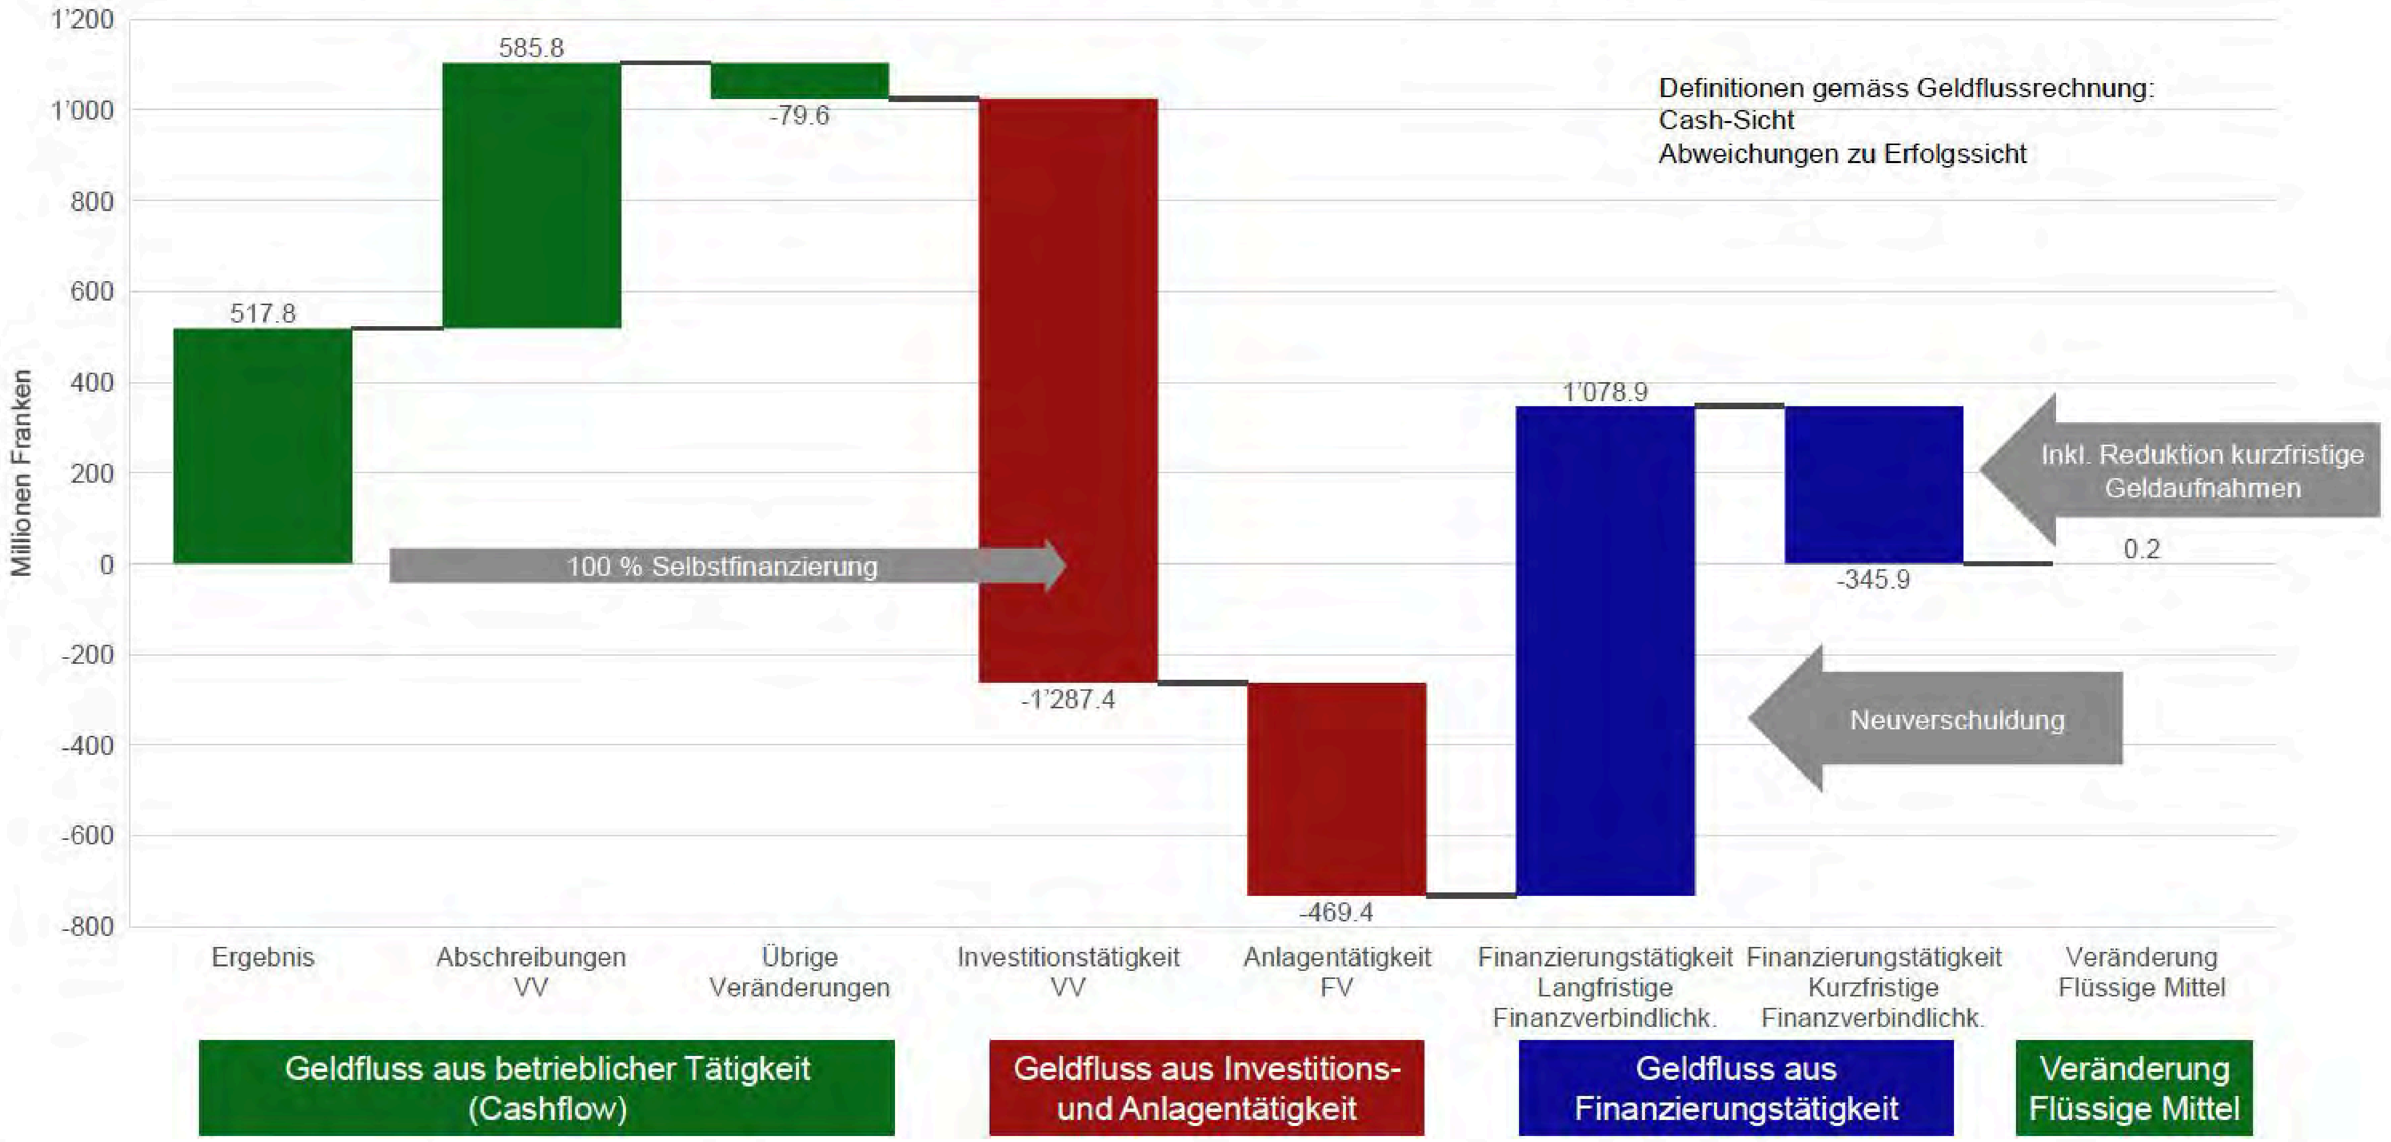
Neben den klassischen Masterstudiengängen stehen aber auch Studiengänge wie Digital Humanities, Changing Societies und European Global Studies sowie Sustainable Development und Educational Sciences in der Gunst von Studierenden ganz oben. Wiederum sehr erfolgreich startet auch der Masterstudiengang Biomedical Engineering in das neue Semester, der gemeinsam mit der Fachhochschule Nordwestschweiz durchgeführt wird. Diese Studienangebote greifen aktuelle gesellschaftliche Themen auf und spiegeln zugleich Forschungsschwerpunkte der Universität Basel wider.

WHY - Überforderung vermeiden

Grundproblematik der hohen Investitionen und starken Zunahme der Verschuldung

Übersicht

Die positiven Rechnungsergebnisses der vergangenen Jahre sowie das hohe Eigenkapital der Stadt Zürich täuschen darüber hinweg, dass der Geldfluss aus betrieblicher Tätigkeit (Cashflow) nicht ausreicht, um die hohen Investitionen im Verwaltungs- und seit einigen Jahren auch im Finanzvermögen, zu finanzieren und gleichzeitig bestehende Schulden refinanzieren zu können. Die anstehenden hohen Investitionen führen zu einer starken Zunahme der Verschuldung, da es nötig ist, langfristiges Fremdkapital aufzunehmen, um sie zu finanzieren. Aufgrund des grossen Investitionsvolumens steigt das Fremdkapital ohne Gegenmassnahmen in den nächsten Jahren stark an. Die Grundproblematik lässt sich anhand des folgenden nachfolgenden Wasserfalldiagramms (von links nach rechts lesen) an den Daten des Rechnungsjahres 2024 erklären:



Im Rahmen des **Cashflows (Geldfluss aus betrieblicher Tätigkeit)** können Investitionen getätigt werden, ohne dass das Fremdkapital ansteigt. Jeder Franken, der über dem Cashflow ausgegeben wird, muss fremdfinanziert werden. In den Jahren seit 2020 wurde ein Cashflow von minimal 746,5 Millionen Franken im 2020 und maximal 1111,2 Millionen Franken im 2021 erzielt. Im Jahr 2024 wurde ein Cashflow von 1024,0 Millionen Franken (Zusammensetzung siehe oben) generiert. Während der Cashflow in den letzten Jahren im Schnitt 1 Milliarde Fran-

Aufgabe – Teil 1

Abgabe: 5. November 2024, 11:55 (Mittag) Uhr via ADAM
Format: A5 Hochformat, gut eingescannt!

Visueller CV (Hauptaufgabe)

Erstellt einen visuellen CV mit 10 Etappen aus eurem Leben.
Der Zeitrahmen ist frei wählbar – ihr entscheidet, welche Positionen für euch bedeutend sind.

Jede Position muss folgende 6 Datendimensionen enthalten:
WO: Ort (Stadt/Land) oder Institution/Organisation
WAS: Tätigkeit/Funktion (kurz)
Start: Startdatum (Monat/Jahr ausreichend)
Dauer: Dauer in Monaten
Joy Index: Zufriedenheit/Freude während dieser Zeit
Kategorie: Work, Education, Holidays, Hobby

Formale Anforderungen
- Format: A5, Hochformat
- Material: Ausgeteiltes Papier + 2 Farbstifte (nur diese 2 Farben verwenden)
- Legende: Pflicht – erklärt alle verwendeten visuellen Überlegungen
- Visualisierung: Freie Wahl der visuellen Form
- Abgabe: Eingescannt (Scanner oder Scan-App mit guter Qualität)
- WICHTIG: wenn ihr mehr Anläufe gebraucht habt, bitte alle scannen und abgeben (Prozess)

Viel Spass bei der Aufgabe und beim Experimentieren! Kommt gut!

30.10.2025

Aufgabe – Teil 2 (neues Blatt)

Abgabe: 5. November 2024, 11:55 (Mittag) Uhr via ADAM
Format: A5 Hochformat, gut eingescannt!

Teil 2: Reflexions-Journal (Meta-Aufgabe)

Füllt das Journal während oder nach der Bearbeitung der Aufgabe aus.

Wählt eine Skalenbreite für alle eure Antworten:
- Option 1: 1-5 (1 = sehr niedrig/negativ, 5 = sehr hoch/positiv)
- Option 2: 1-10 (1 = sehr niedrig/negativ, 10 = sehr hoch/positiv)
- Optoin 3: etwas mit Smileys

Wichtig: Bleibt bei dieser Skala für alle folgenden Aufgaben im Semester!
Diese Fragen sind ein Vorschlag. Ihr könnt selbstverständlich 10 eigene Fragen erfinden, welche im Kontext passend sind.

Fragen zur Aufgabe
- Wie langweilig/kurzweilig war die Aufgabe? (1 = sehr langweilig, max = sehr kurzweilig)
- Wie lange hat sich die Aufgabe angefühlt? (geschätzte Zeit in Minuten)
- Tatsächliche Bearbeitungszeit: ___ Minuten

Fragen zu euch heute
- Allgemeines Wohlbefinden heute: ___
- Motivation für diesen Kurs: ___
- Motivation, zur Uni zu gehen: ___
- Müdigkeit: ___
- Hunger: ___

Kontext
- Wetter heute: (sonnig / bewölkt / regnerisch / Schnee / andere)
- Temperatur: ___ °C

Viel Spass bei der Aufgabe und beim Experimentieren! Kommt gut!

Data Visualization

"Data visualization is the process of creating graphical representations of data in order to better understand, analyze, and communicate information contained within the data. This process involves mapping data to visual encodings such as points, lines, or areas on a screen, which are then used to represent data features and patterns. The goal is to transform complex data into a comprehensible and meaningful representation that can reveal relationships, trends, and insights that might be difficult to discern from raw data alone"
(Ware, 2012, p. 1).

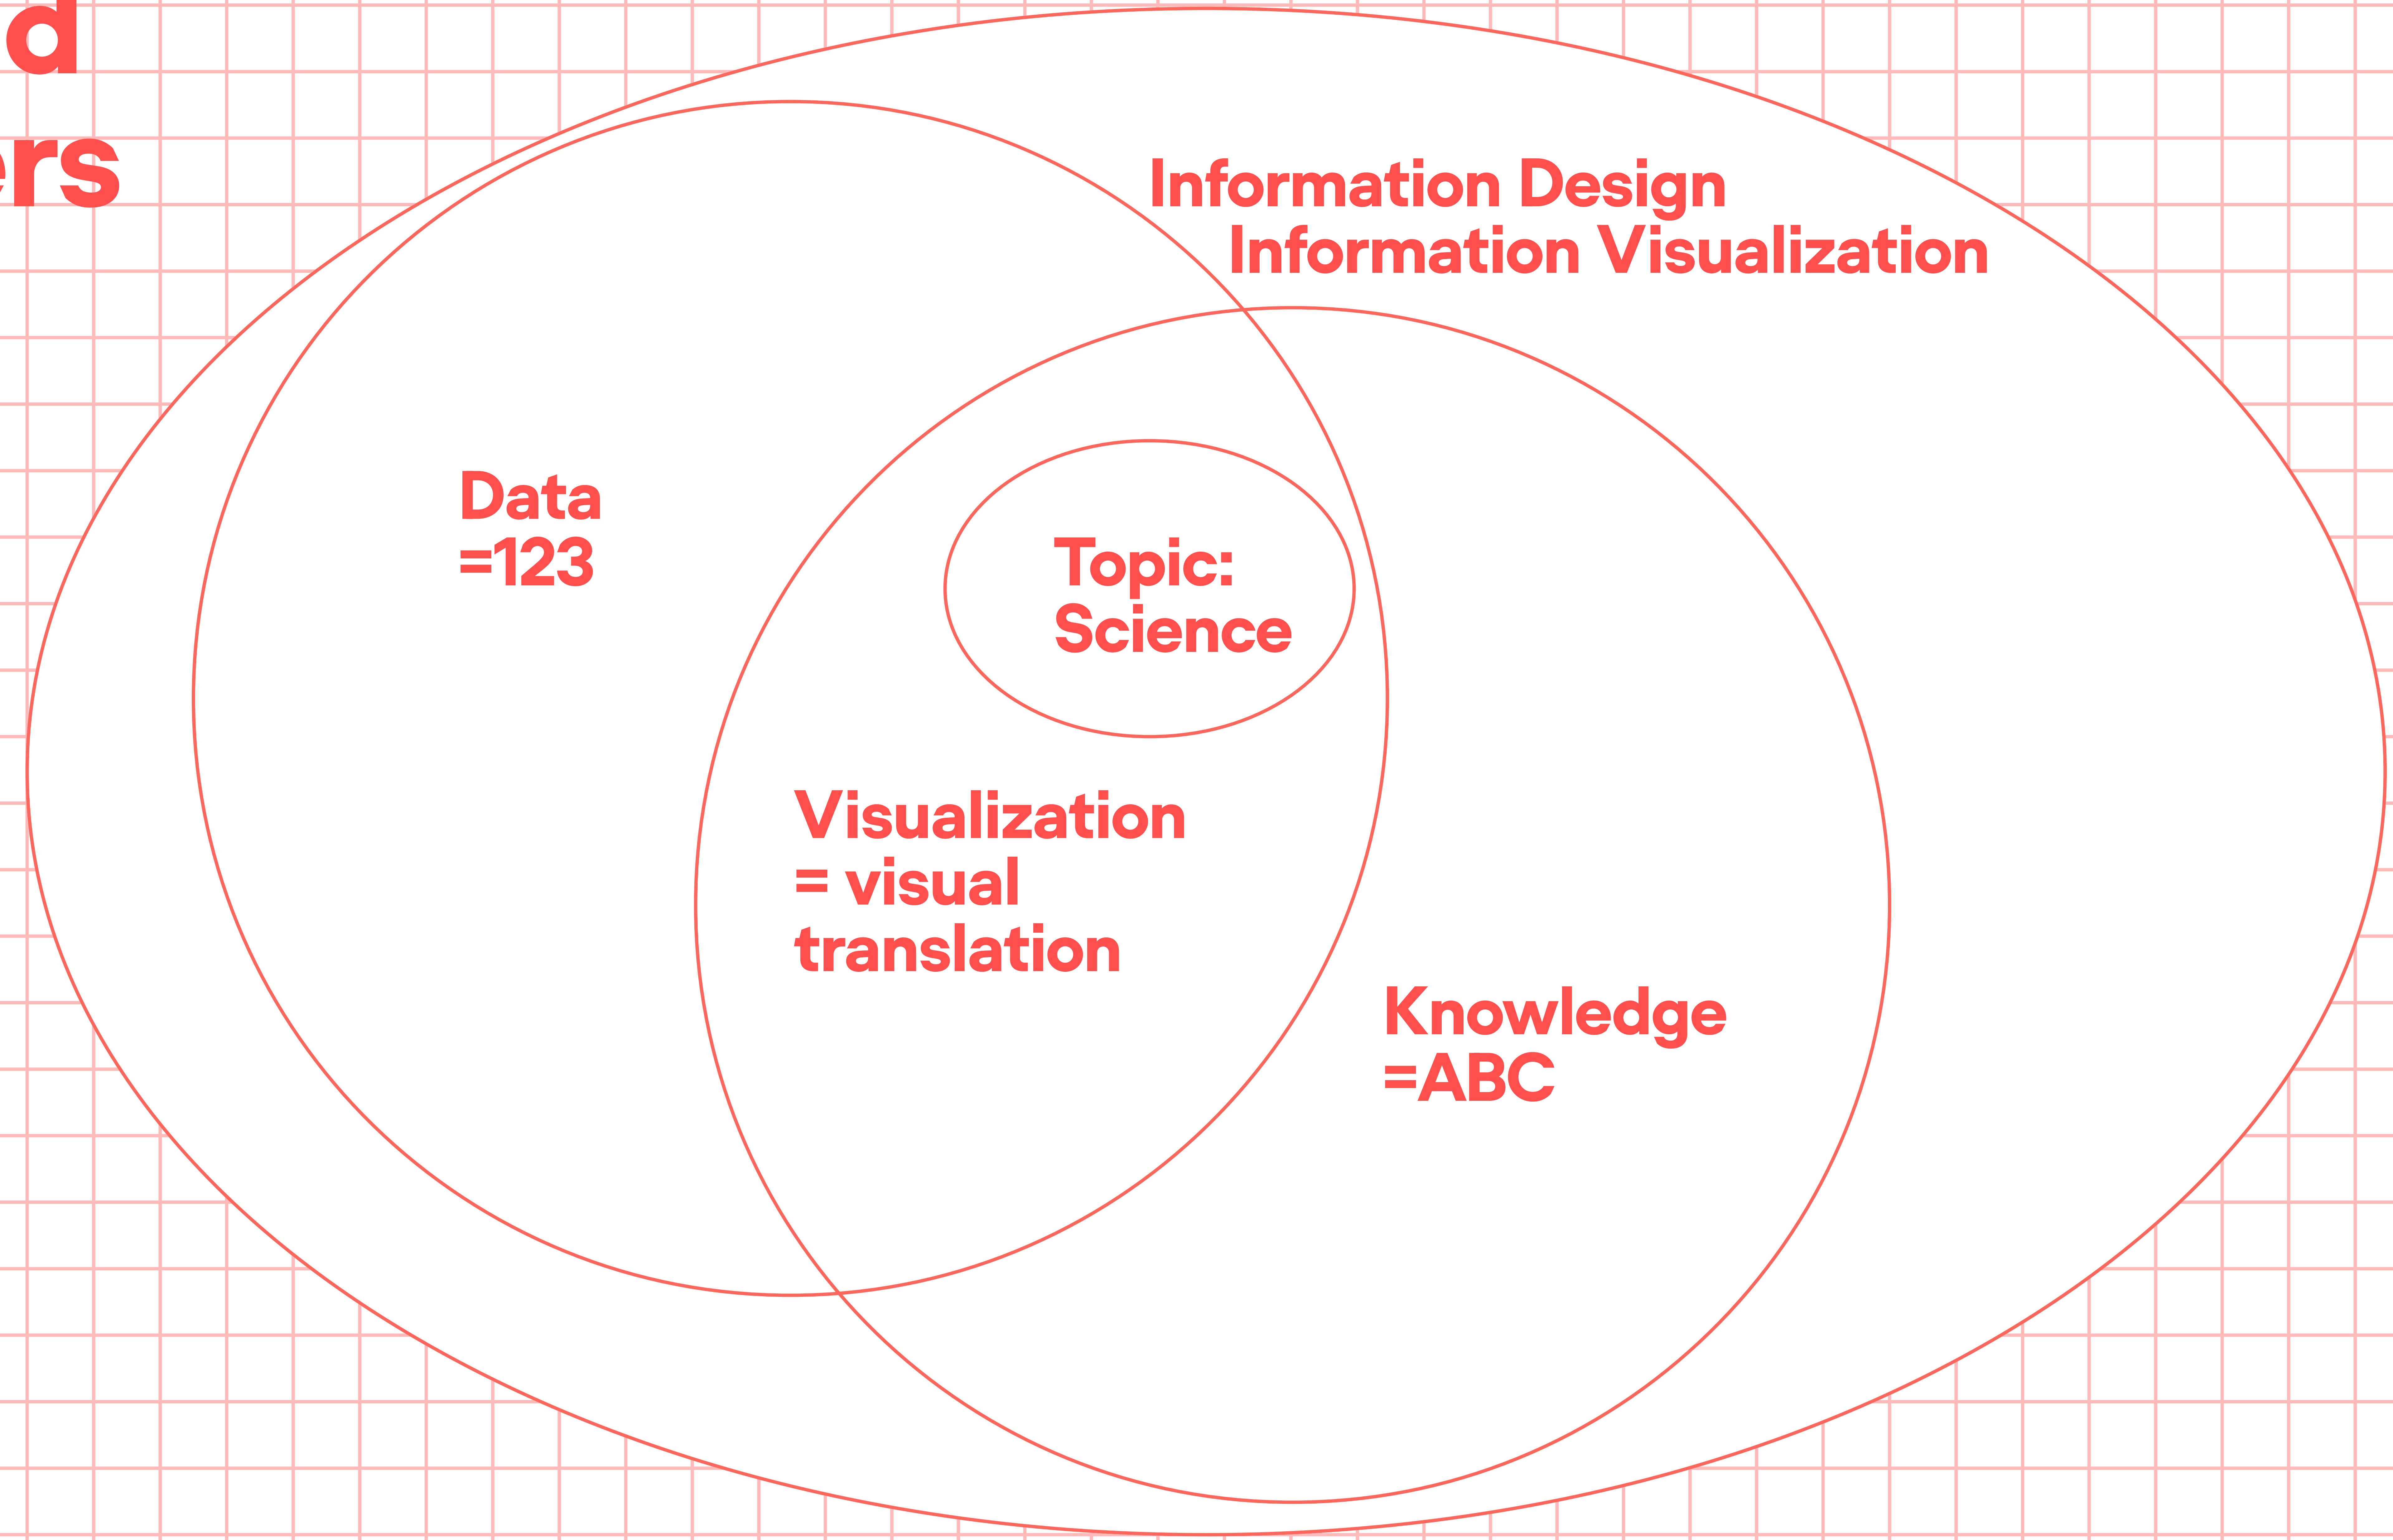
Text and Numbers



New Definition

Information Design

Information design systematically transforms complex information into clear, accessible visual and structural forms that facilitate understanding and support decision-making.

Data Visualization

Data visualization transforms data structured by geolocation, relation, alphabet, number, time, or category (GRANT > C) into visual representations that reveal patterns and relationships through systematic mapping of a table (data dimensions) to diagrams and visual elements.

Knowledge Viz

Knowledge visualization transforms conceptual information structured by relation, alphabet, or category (RAC) into visual representations that reveal patterns and relationships through systematic mapping of structured text to relationship diagrams and visual elements.

Knowledge Viz

Knowledge visualization transforms conceptual information structured by relation, alphabet, or category (RAC) into visual representations that reveal patterns and relationships through systematic mapping of structured text to relationship diagrams and visual elements.

Gedankenreisen – Worte zum Träumen

scheint.« Hänsel aber hatte nicht nach dem Kätzchen gesehen, sondern immer einen von den blanken Kieselsteinen aus seiner Tasche auf den Weg geworfen.

Als sie mitten in den Wald gekommen waren, sprach der Vater: »Nun sammelt Holz, ihr Kinder, ich will ein Feuer anmachen, damit ihr nicht friert.« Hänsel und Gretel trugen Reisig zusammen, einen kleinen Berg hoch. Das Reisig ward angezündet, und als die Flamme recht hoch brannte, sagte die Frau: »Nun legt euch ans Feuer, ihr Kinder, wir gehen in den Wald und hauen Holz. Wenn wir fertig sind, kommen wir und holen euch ab.«

Hänsel und Gretel saßen am Feuer, und als der Mittag kam, aß jedes sein Stücklein Brot. Und weil sie die Schläge der Holzaxt hörten, so glaubten sie, ihr Vater wäre in der Nähe. Es war aber nicht die Holzaxt, es war ein Ast, den er an einen dürren Baum gebunden hatte und den der Wind hin und her schlug. Und als sie so lange gesessen hatten, fielen ihnen die Augen zu, und sie schliefen ein. Als sie erwachten, war es finstere Nacht.

Gretel fing an zu weinen und sprach: »Wie sollen wir nun aus dem Walde kommen!« Hänsel aber tröstete sie: »Wart nur ein Weilchen, bis der Mond aufgegangen ist, dann wollen wir den Weg schon finden.« Und als der volle Mond aufgestiegen war, so nahm Hänsel sein Schwesterchen an der Hand und ging den Kieselsteinen nach, die schimmerten wie neu geschlagene Batzen und zeigten ihnen den Weg.

Sie gingen die ganze Nacht hindurch und kamen bei anbrechendem Tage wieder zu ihres Vaters Haus. Sie klopften und als die Frau aufmachte und sah, dass es Hänsel und Gretel waren, sprach sie: »Ihr bösen Kinder, was habt ihr so lange im Walde geschlafen, wir haben geglaubt, ihr wolltet gar nicht wiederkommen.« Der Vater aber freute sich, denn es war ihm zu Herzen gegangen, dass er sie zurückgelassen hatte.

Nicht lange danach war wieder Not in allen Ecken, und die Kinder hörten, wie die Mutter nachts im Bette zu dem Vater sprach: »Alles ist wieder aufgezehrt, wir haben noch einen halben Laib Brot, hernach hat das Lied ein Ende. Die Kinder müssen fort, wir wollen sie tiefer in den Wald hineinführen, damit sie den Weg nicht wieder herausfinden.« Dem Mann fiel's schwer aufs Herz, und er dachte: »Es wäre besser, wenn du den letzten Bissen mit deinen Kindern teiltest.« Aber die Frau hörte auf nichts, was er sagte, schalt ihn und machte ihm Vorwürfe. Wer A sagt, muss auch B sagen, und weil er das erste Mal nachgegeben hatte, so musste er es auch zum zweiten Mal.

Die Kinder waren aber noch wach gewesen und hatten alles mit angehört. Als die Alten schliefen, stand Hänsel wieder auf, wollte hinaus und Kieselsteine auflesen, aber die Frau hatte die Tür verschlossen. Aber er tröstete sein

Design Geheimnis: Umgang mit “weissen” Raum und die Navigation durch diese

Texte zerlegen, analysieren und strukturieren.
Textbilder entstehen indem wir einen Fliesstext zerschneiden und anders zusammenstellen, clustern und Weissräume nutzen.

Unstructured running text as a starting point

Running text is intended to give the reader time to bring to mind the respective content in one's imagination. Written stories feature descriptive details and inspire the readers' power of imagination, encouraging them to mentally dive into their own world. The information in a section is unstructured, without however having a negative effect on how easy it is to understand.

Narrators tell their stories in the way their thoughts flow. However, for the purpose of searching or obtaining a quick overview, narrations are less suitable. For example, when searching for Otto Wagner's date of birth in the text about the entrepreneurial family, one has to scan the text line by line until this is found. Clearly in this case we cannot talk about a quick overview or rapid navigation.

The story of the entrepreneurial families

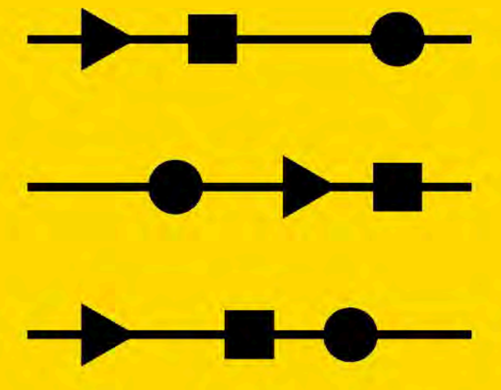
The success of the Browag AG company goes back to Hermann Wagner and James Brown. Hermann Wagner was born in Vienna in 1871 (died 1961). During his student years he got to know Vienna-born Emma Moser (1875), who was four years younger (died 1960). In 1900, Hermann and Emma married in Vienna, where the children Otto (1901, died 1924) and Paul (1914, died 2011) were also born. With the help of the Moser family's financial resources, Hermann was able to set up Wagner Farben GmbH and establish it successfully in Vienna. After finishing school, Otto decided to go to Munich to study and Paul decided to follow in his father Hermann's footsteps. Otto Wagner died tragically of tuberculosis in Munich at the age of 23.

In the course of his business, Paul traveled to other countries and, in 1934, whilst in Paris, he met his future wife, Elisabeth Brown of Brown Chemicals Inc. The company Brown Chemicals Inc. had been founded in London by James Brown (born 1882, died 1947). He benefited greatly from his marriage to Marie Durand (born 1879, died 1951), who came from a prosperous Parisian family. James built up his business in London as well as in Paris, where the couple spent most of their time. Marie and James had two daughters, Anna (born 1913, died 1996) and Elisabeth (born 1915, died 2014). Anna was born while the family spent some time in London; she grew up there, went to a London boarding school, and spent the rest of her life in London. Her sister Elisabeth grew up in Paris where she lived with her parents; from an early age, she joined papa James's company, where she later met Paul Wagner.

The wedding between Paul and Elisabeth not only sealed the matrimonial bond, but also the business relationship, which led to the formation of the newly merged Browag AG. In 1935, Hermann was born in Paris (died 1987) and seven years later, along came his sister Marie (born 1942, died 2020). Owing to his commitment to the time-consuming management of the branch in Vienna, Paul did not move away from Vienna.

Thus it came about that—some years later—Elisabeth and Paul separated. Paul decided to sell his company shares to Elisabeth, and to quit Browag AG. Their son Hermann decided to go to Vienna to study and to live with his grandparents, Hermann and Emma. Marie, on the other hand, wanted to study art in London and decided not to take up her mother's offer of joining the company in Paris. Elisabeth Brown is considered one of the most successful female entrepreneurs of the 21st century and is leaving her entire fortune to charitable organizations with a focus on design.

Unstructured running text with highlights



In this version, the running text has already been enriched with a few supporting symbols. Each symbol represents a certain type of information and is marked in yellow. Although at this stage we cannot yet talk about a visualization, a search, e.g. for Otto Wagner's date of birth is made easier. The text is still unstructured.

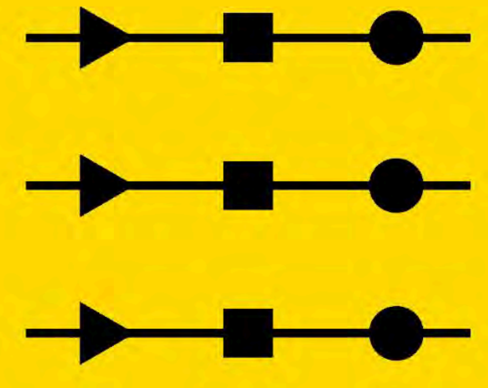
Running text as a list, structured with highlights



A mere compilation of data in the form of a list is not enough to structure the underlying text. A list guides the eye through the listed items. The added value is not achieved until the sentence structure becomes comparable through identical arrangement. The symbols are used to make things even clearer. It is possible—albeit not yet very easy—to detect a pattern in the lines.

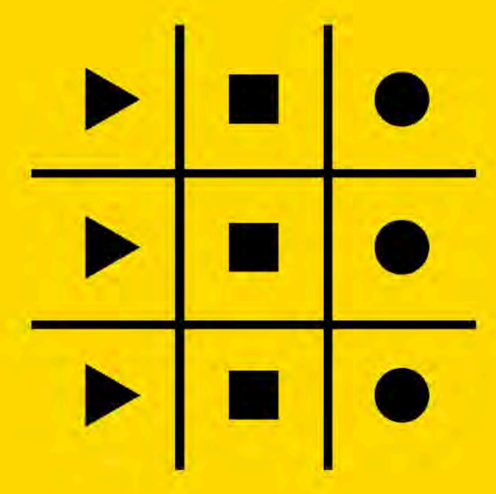
Structure in table form



When, in a list consisting of sentences with an identical structure, regular spaces are inserted between the different parts of the sentence, a table is created. The placement of structured text elements in a grid generates good readability and comparability of the contents. The highlighting symbols used previously are no longer required here—the gap between the parts of the sentence orders the elements in accordance with their affiliation and columns are created.

Structure in table form, nested

Through a new arrangement, it is possible to organize a table such that repeating terms can be omitted. This has the effect of making patterns discernible already at the table stage. Nesting a table in this way increases the readability many times over. In this step it is always advisable to start with the column that has the fewest expressions. In this case it is the family name, with the two expressions Wagner and Brown.

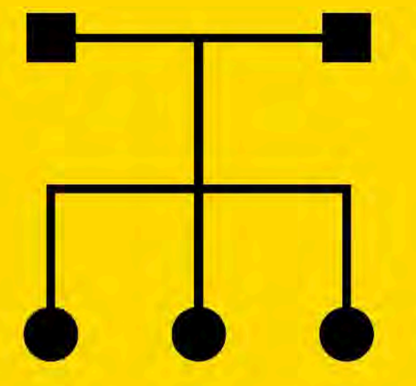
Hierarchical structure



The construction of a family tree is founded on two basic elements: firstly, on a clear structure, as in a table, and secondly, on the further information about the connections between the various people mentioned in the text. The newly created order makes it possible to discern patterns even faster. Family trees are often used in visualization to represent hierarchies in groups. In this concrete example, the family tree shows the sequence of relationships between the generations of the two families. Usually, a box represents a person, and the nodes and linear connections represent the relationships between the members.
